

PHP Team Lead

Ho Chi Minh city

02 April 2021

DESCRIPTION

Be part of a team who offers exciting opportunities where you can have career growth in a driven, passionate, hard-working, goal-oriented, and encouraging environment. We are a fintech company used by over 50,000 businesses across Australia who develop innovative business tools of tomorrow.

WHAT YOU WILL DO:

- We are a passionate, dedicated and driven engineering team looking for experienced Lead Engineers that can help take our technology stack to the next level. With a focus on user experience, scalability, automation and innovation, we are becoming a data-driven company that is constantly trying to improve our services and strive to create the best possible experience for our customers. With innovative and interactive credit reporting tools and an analytical and recommendation engine based on our unique peer to peer community data set, this is an outstanding opportunity to work in a challenging fast-paced role.

ABOUT YOU:

- You are a good fit for us if you love coding and have a real passion for building web applications. You would have worked with complex projects in collaboration with other team members to create user-friendly solutions that delight your users. You are passionate about continuously learning and experimenting with new technologies along with mentoring junior members of the team. You enjoy collaborating with others inside and outside of the engineering team. You are motivated, passionate, and proud of your work. You take initiative to drive projects forward and you have the ability to articulate ideas and think critically about how to execute them.

WHAT WE NEED FROM YOU:

- At least 7 years' experience working in Software Development, experience in leading an Engineer team working on complex applications for enterprise products.
- Deep understanding of how to build performant, reliable, decoupled, testable and maintainable code with PHP - Symfony

- Experience with continuous integration and deployment pipelines using tools such as Jenkins, TeamCity, CircleCI, etc.
- Experience with building services and RESTful APIs.
- Experience with HTML5, CSS3 and JavaScript.
- AWS services such as EC2, ElasticSearch, SQS, RDS, Lambda and S3. Our data centres are exclusively in the cloud.
- Develop and document technical standards for the company platform.
- Ensure development standards are met.
- Be a champion of the company's culture and values.
- Strong English communication skills (both verbal & written), especially in the global software development environment.
- Strong leadership & coaching skills (both in technical & human relations).

IT'S GREAT, BUT NOT REQUIRED IF YOU HAVE:

- Experience with Angular and/or React.
- Experience and knowledge of building microservices.
- Worked with containers.
- An understanding of Domain-Driven Design and bounded contexts.
