

Java Team Lead (OTAs)

Ho Chi Minh city

15 March 2021

DESCRIPTION

The company provides a unique, global work environment that captures the speed, innovation and excitement of a startup, at a thriving, growing and well-established industry brand. You will be part of a dynamic, fun, and energetic team where you can immediately make meaningful contributions.

WHAT YOU WILL DO:

- Provide hands-on leadership to the design, development, and deployment of technical solutions.
- Lead and conduct training to empower engineers on sufficient programming skills.
- Design, develop, review, implement, and manage Java applications and services for the production and pre-release environments.
- Design, develop, review, implement, and manage continuous integration, build management and deployment scripts, systems, and any code as required
- Participate in Agile software development, prototyping, and code review with the international development team.
- Build scalable microservices-based products and APIs using Java technologies on AWS cloud architecture.
- Understand the requirements of the customer or business and utilize this knowledge to develop applications that are consistent with this.
- Work with delivery teams to achieve success through development using CI/CD and DevOps practices, processes, and tooling.
- Provide robust coding practices, solid unit/component test coverage, and debugging code.

WHAT WE NEED FROM YOU:

- At least 7 years' experience working in Software Development, experience in leading an Engineer team working on complex, large-scale applications for enterprise products.
- Strong experience in Java, Spring, MySQL and Kubernetes.
- Solid experience in designing & developing RESTful APIs and microservices-based systems.
- Experience in Cloud computing (Amazon Web Services).
- Strong DevOps and modern CI/CD pipelines.
- Experience in Agile development environments.
- Well-versed in writing structured, well-documented, maintainable, and clean code.
- Good problem-solving and analytical skills.
- Good understanding of standard Software Engineering processes, Test Engineering & Automation.
- Ability to work in a complex development environment and handle dependencies across multiple teams and branches.
- Some prior experience investigating memory or performance issues in enterprise applications.
- Strong English communication skills (both verbal & written), especially in the global software development environment.
- Strong leadership & coaching skills (both in technical & human relations).

BIG PLUS IF YOU HAVE:

- Experience in PHP development.
- A love of travel is not required, but hey - why not?
- Any additional certification or training in IT, Business, Computer Science, or related areas.

WHY US?

The Experiences Team is committed to helping travelers make the most of their trips, especially the attractions and activities along the way. Our team is in need of a creative engineer who gets excited about technology and travels to help transform the company website experience, modernize our architecture and grow our well-established Experiences business. We're looking for a senior-level engineer to join our team, someone that can grok complex systems, manage a workload independently, deliver high-quality solutions and participate as part of a distributed team. You'll join a first-in-class team of engineers, designers and product managers that quickly deliver highly scalable compelling features to 400+ million monthly visitors using an array of cutting-edge technologies.
